

- Formerly the National Digital Research Centre, the organisation is now known only as **NDRC**.
- NDRC builds and invests in very young digital companies, or startups. Our offering of early stage investment and development support is what makes us unique.
- NDRC has invested in more than 250 startups to date.
- Approximately 20 per cent of our founders are international.
- Approximately 50 per cent of the companies NDRC invests in go on to receive follow-on investment, with 25 per cent securing at least €250,000, allowing them to continue on their path to growth.
- Around half of the companies NDRC has supported are still operating, or have exited, well ahead of international norms.
- NDRC companies have created 996 direct jobs to date, securing almost €200 million in follow-on funding and reaching a market capitalisation of approximately €486 million.
- With a mandate from the Department of Communications, Climate Action and Environment, NDRC aims to ensure digital entrepreneurship is a growing and vibrant part of the economy.
- With ten years' experience, NDRC's key skill lies in finding companies and teams with the potential to grow internationally.
- NDRC currently runs programmes in Dublin, Galway and Waterford, as well as providing support for similar activities in Oman.
- Once a company joins NDRC, the team works intensively with each, over a short time frame, to help them understand what value their company can offer customers, their strategy for growth and getting them ready to meet the demands of both investors and customers.
- The short time span and the intensity of this commercialisation work is the acceleration process. It is this offering of capital investment and development support that makes NDRC effective.

- NDRC's track record means investors view NDRC as a very effective filter that helps them find quality digital startups.
